- Technology and innovation
- Transport and automotive

The law regarding business method patents is constantly evolving. Our patent professionals follow these legal developments closely and have extensive experience with patenting business method innovations. The highly trained professionals in our firm have the technical expertise and experience that enable us to work with clients on identifying innovations in their business practices that are suitable for patent protection in the U.S. and other countries, where available.

Business method patents can be subject to increased legal and public scrutiny while pending and post-issuance. In recent years, protecting innovations in business methods has presented some unique challenges, including navigating case law after the landmark U.S. Supreme Court decisions in *Bilski v. Kappos* and *Alice Corporation Pty. Ltd. v. CLS Bank International* and the post-grant procedures in the AIA.

Our professionals are sensitive to this complex environment. Hamilton Brook Smith Reynolds provides world-class assistance to our clients to ensure that their patent filings are directed toward innovations in their business practices that claim technical features beyond the scope of a pure "business method." Our increased sensitivity and awareness to the potential issues with business method patents helps us procure more robust and valuable patents on business-related innovations for our clients.
